

Open these four doors.

The new M&M site is live. To finish the June setup, Ola can open these four areas during the call or invite Ni Biashara as a collaborator.

ACCESS RULE

Log in live. Don't send secrets.

Ola can open the portal, invite us, or approve the exact change while we sit together.

DOMAIN

EMAIL

SQUARE

ORDERS

- No passwords, recovery codes, card numbers, or API keys in chat.
- Read-only checks happen first; customer-facing changes happen after approval.
- Every DNS, mailbox, payment, and POS change gets verified before we call it done.

TODAY'S POSITION

READY

New website

mmafricankitchen.com is live.

READY

Backup mirror

Static fallback is already handled by Ni Biashara.

OPEN

Old website redirect

Needs StormerHost, cPanel, or WordPress access.

OPEN

Email, Square, Uber/POS

Needs account access or collaborator invites.

WHAT TO BRING

The four access keys.

Keep this part simple. If Ola can open these four areas during the setup call, the remaining work becomes verification and controlled cutover.

1

Old website

StormerHost, cPanel, or WordPress admin for m-mafricankitchen.com so old links can redirect.

2

Email

Google Workspace or another mailbox provider for @mmafricankitchen.com.

3

Square

Dashboard access, production location ID, and the first payment/order surface to activate.

4

Uber + POS

Uber Eats Manager, TouchBistro access, Grubhub status, and the incoming POS name.

SETUP LINKS

Open the right screen fast.

These links keep the setup call moving and put the right admin screens one click away.

Email

Create the mailbox, add users/aliases, then approve Google DNS records.

Create
Google
Workspace

<https://workspace.google.com/business/signup>

Google
Admin

<https://admin.google.com/>

Google
MX setup

<https://support.google.com/a/answer/140034>

Square

Confirm production account, location, and whether checkout links or Orders API go first.

Square Dashboard

<https://squareup.com/dashboard/>

Square Locations

<https://squareup.com/dashboard/locations>

Square Developer Apps

<https://developer.squareup.com/apps>

Ordering + POS

Check whether direct access is available; if not, approve an email or printed-ticket fallback.

Uber Eats Manager

<https://merchants.ubereats.com/manager/>

TouchBistro Admin

<https://admin.touchbistro.com/>

Grubhub Restaurants

<https://restaurant.grubhub.com/login/>

Old domain

Preferred: DNS/cPanel redirect. Fallback: WordPress redirect if hosting access is easier.

Old cPanel

<https://cpanel.m-mafricankitchen.com/>

Old WordPress Admin

<https://m-mafricankitchen.com/wp-admin/>

Mailbox recommendation

Use Google Workspace unless Ola already has a preferred provider. One paid admin inbox can support aliases/groups for info@, orders@, and events@.

Square first decision

Pick the first release surface: checkout links, Orders API, Terminal, or all. Do not paste tokens into chat.

Uber/POS fallback

If Uber API access is gated, approve an email or printed-ticket bridge. Keep the current Grubhub to TouchBistro connection unchanged until the replacement POS is chosen.

SAFE SEQUENCE

1. Sign

notary / agreement

2. Open

owner logs in

3. Invite

collaborator access

4. Test

read-only first

5. Approve

exact change

6. Verify

proof + rollback

Public site: mmafricankitchen.com · Old site: m-mafricankitchen.com · Backup mirror: [ready](#)

Prepared by Ni Biashara for M&M African Kitchen & Bar. No production DNS, mailbox, payment, or POS change happens without approval and verification.
